

2011 Saskatchewan Traffic Accident Facts

Planning a safe ride home is now easier than ever.

The **SGI Safe Ride App** puts all Saskatchewan taxis, bus routes, designated driver services and even your own designated drivers in the palm of your hand so you can always plan a safe ride home.

Get it today! The app is available on iPhone, Blackberry and Android and can be downloaded free from any app store by searching SGI Safe Ride in app store search engines.

Letter of Transmittal

February 2013

To: Saskatchewan's Traffic Safety Community

I am pleased to present to you the "Saskatchewan Traffic Accident Facts" report for 2011. Our report is based on SGI's Traffic Accident Information System (TAIS), a database on motor vehicle collisions.

It takes the team effort and commitment of law enforcement officers throughout Saskatchewan and SGI's group of claims adjusters to make this publication possible. Their complete, consistent and reliable reporting of motor vehicle crashes greatly enhances the report's integrity.

They know first hand that too many people continue to be injured and lose their lives on our province's roads as a result of traffic collisions. They see the impact of traffic crashes on a daily basis.

This report will assist you in making informed decisions about road safety moving forward.

Please do not hesitate to contact SGI should you need any additional information.

Yours truly,

George Eguakun Manager, Traffic Safety Program Evaluation

Traffic Safety Services

2011 QUICK FACTS

(2011 compared to 2010)

	2010	2011	% CHANGE
Property Damage Only Collisions	23,974	24,355	1.6
Personal Injury Collisions	4,756	5,158	8.5
Fatal Collisions	145	138	-4.8
Total Reported Collisions	28,875	29,651	2.7
Number of Deaths	167	150	-10.2
Number of Injuries	6,538	6,874	5.1
Provincial Highway Collisions	7,015	7,621	8.6

Urban Street Collisions	18,414	18,717	1.6
Other Locations	865	945	9.2
Registered Vehicles	848,341	857,552	1.1
Licensed Vehicle Operators	721,809	735,634	1.9
Saskatchewan Population	1,049,701	1,033,381	-1.6
Collisions Per 100 Licensed Operators	4.00	4.03	0.8
Collisions Per 100 Registered Vehicles	3.40	3.46	1.6
Collisions Per 100 Population	2.75	2.87	4.3
Casualty Collisions Per 100 Licensed Operators	0.68	0.72	6.0
Casualty Collisions Per 100 Registered Vehicles	0.58	0.62	6.9
Casualty Collisions Per 100 Population	0.47	0.51	9.8

Disclaimer:

Due to differences in reporting definitions, the numbers of collisions and associated casualties published in this report do not necessarily reflect the collision and injury claims experience of the Saskatchewan Auto Fund. Traffic collisions are reported in the Traffic Accident Information System (TAIS) only when the estimated repair costs for all vehicles and property exceed \$5,000 or personal injuries are sustained, whereas a collision claim may occur for any amount of property damage over the applicable deductible. Private property and parking lot collisions, as well as deliberate acts of vandalism or natural causes, are also not recorded in TAIS.

Effective Jan. 1, 2010, the damage threshold for recording property damage only collisions from SGI's claims system into TAIS was increased from \$1,000 to \$5,000. This change resulted in a significant decrease of property damage only collisions entered into TAIS. For consistency, this threshold change was also applied to previous years of data shown in this publication to allow for comparison.

Preface

The Traffic Accident Information System (TAIS) compiles information on traffic collisions occurring on Saskatchewan roads. Collisions involving bodily injury or death, a hit and run, an out-of-province vehicle, an unregistered vehicle, an impaired operator and collisions where vehicles have to be towed are reported through police agencies. A Motor Vehicle Accident (MVA) form is completed in accordance with Section 253 of *The Traffic Safety Act* and forwarded to Saskatchewan Government Insurance (SGI). Information on all other types of collisions is collected through SGI's claims reporting process. Both data sources are combined to create TAIS. The collision database and its publications are administered by SGI.

TAIS provides comprehensive collision data to many agencies for the design and evaluation of traffic safety programs. The importance of accurate and timely collision data is evident by such initiatives as Transport Canada's Road Safety Vision 2010. This was a national initiative to make Canada's roads the safest in the world. The strategic objectives of the plan were to raise public awareness of road safety issues; improve communication, co-operation and collaboration among road safety agencies; enhance enforcement measures and improve national road safety data quality and collection.

The collection of traffic collision information is made possible by the efforts and dedication of law enforcement and SGI staff who investigate, report and record the information on TAIS.

Historical Trends

This section illustrates the 24-year history of collisions, victims, licensed drivers and vehicles in Saskatchewan.

Reporting definitions must be considered when looking at past trends. Changes to the reporting thresholds have resulted in large declines in property damage only collisions during the years 1984, 1993 and 2010. The continued reduction in police resources available for traffic enforcement also had an effect on the number of property damage only collisions being reported. This is especially true for the reporting of wildlife collisions since 1996.

The traffic accident reporting system was streamlined on Aug. 1, 2002, so that only collisions involving bodily injury, death, a hit and run, an out-of-province vehicle, an unregistered vehicle, an impaired operator and collisions where vehicles have to be towed are reported to police. Information on all other types of collisions that meet the reporting criteria for our traffic accident system are collected through SGI's claims reporting process. This change has freed up valuable enforcement resources that can be devoted to other high-priority issues. This change resulted in a 49.5% increase in the number of property damage only collisions captured by TAIS from 2003 to date as compared to the previous three-year average.

Effective Jan. 1, 2010, the damage threshold for recording property damage only collisions from SGI's claims system into TAIS was increased from \$1,000 to \$5,000. This change resulted in a 40-50% decrease of property damage only collisions entered into TAIS. See the disclaimer on the back of the front cover.

Trends in crashes resulting in fatalities and injuries have shown a steady decline since 1983. Fatal crashes peaked in 1986, while injury crashes peaked in 1987. The five-year averages for fatal and injury crashes are now 134 and 5,025 respectively, compared to 191 and 5,769 between 1983 and 1987. All collisions showed an upward trend from 2002 due to the change in reporting threshold. Data for recent years exhibit a fairly steady count of total collisions in the province. Vehicle counts and the number of licensed drivers have been increasing since 2005.

A complete listing of all the numbers used in the charts and changes in definitions can be found in Appendices A1.1 to A4.2.

See Appendix sections A1.1 to A1.7 for additional details.

Time of Occurrence

Figures 2.1 to 2.3 show the frequency of 2011 traffic collisions, injuries and deaths compared to a three-year average. It is not unusual to see more fluctuations in the monthly averages in the smaller numbers, such as deaths, than the larger numbers of total collisions.

Figures 2.4 and 2.5 show the collision ratio of travel versus collisions on provincial highways. The risk of being involved in a highway collision is highest on Fridays and around 3 a.m.

Table 2.2 shows the number of collisions on public holidays and long weekends throughout the year, as well as on other specific periods of interest.

Table 2.3 shows the number of collisions occurring by day of week and hour of occurrence on all road systems. The highest frequency of traffic collisions during 2011 occurred Friday afternoons between the hours of 4 and 6 p.m.

Major Contributing Factors

Contributing factors are those circumstances or factors that have directly contributed to the collision or its severity. TAIS recognizes that a collision usually results from many causal factors. The collision data system accepts up to four contributing factors for each vehicle involved in a collision. Factors can be selected from four categories: human condition, human action, vehicle condition or driving environment.

In traffic collisions reported by police agencies, the causal factors are assigned by the investigating officer. Incidents reported through SGI's Dial-A-Claim are assigned causal factors only if they are clearly identified in the drivers' statements. The causal factors in property damage only collisions are therefore much more subjective in nature and not directly comparable to previous years and casualty collisions.

This section summarizes all contributing factors that were reported. In 2011, a total of 44,055 factors contributed to 29,651 collisions. The numbers in these figures represent the number of occurrences of each factor.

Driver inattention and driver distraction account for 25.5% of all factors reported. SGI is aware of this fact and continues to work with a number of organizations to develop education and awareness programs to address this problem.

Figure 3.1 shows that human condition is a more prevalent factor in fatal collisions (43.7%) than in all collisions (33.8%). Human condition and human action account for 63.8% of all factors in collisions, as compared to 85.0% of factors in fatal crashes.

Figure 3.2 summarizes the factors by road system. Human factors contribute to 82.3% of urban collisions, while environmental conditions, mainly animal actions, are more prevalent in rural and highway collisions (59.1% and 64.2%).

Environmental Factors

The driving environment consists of road, light and weather conditions, as well as events leading up to and during a collision. It is important to understand all of these factors to properly design effective countermeasures for reducing collisions.

This section provides a breakdown of collisions for each of the different driving environments by severity and road system.

Tables 4.1 to 4.3 and Table 4.8 show that most collisions occur under near ideal conditions, such as a dry surface (52%), clear weather (58%), daylight (52%) and on a straight/level stretch of road (70%). These numbers are higher than actually reported due to the fact that in many cases a condition is reported only if it was a factor in the collision. This is evident by the 22.5% of collisions where a weather condition is not stated.

Tables 4.6 and 4.7 provide a breakdown of the types of collisions by single and multiple vehicle configurations. Single vehicle collisions account for 87% of the collisions on rural roads, 83% on provincial highways and 14% on urban streets.

Table 4.9 and 4.10 describe some of the events that occur in collisions, such as hitting a fixed or movable object, overturning or jackknifing.

Collisions by Road Surface Condition and Severity

Table 4.1

	Property	Personal			
Surface Condition	Damage	Injury	Fatal	Total	%
Dry	12,433	2,834	97	15,364	51.8

TAIS records up to three events in order of sequence for each vehicle involved in a collision.

Tables 4.9 and 4.10 summarize the 41,907 events that were recorded in 29,651 collisions. It should also be noted that these figures represent the total number of occurrences of that event.

Driver Factors

Driver factors captured for collisions include the driver's age and gender, traffic charges laid, human action contributing to the collision and the driver's licence class. The information gathered for drivers shows several indicators that help predict an individual's likelihood of causing a collision. These indicators are used to identify the characteristics of those drivers who are more likely to cause collisions, and to address the behaviours that increase their risk of collision.

Driver Improvement Program

SGI's Driver Improvement Program monitors the driving records of all Saskatchewan drivers and intervenes when an individual's record warrants it. The purpose of the program is to encourage drivers that are incurring convictions, or are involved in at-fault collisions, to develop and maintain safe driving habits. SGI uses a demerit system for tracking driver performance.

SGI sends warning letters advising drivers of their deteriorating driving records. Drivers who, in spite of a warning, incur additional convictions or at-fault collisions are required to attend a defensive driving course. Further convictions or at-fault collisions may result in the driver being required to take driver improvement training. Subsequent convictions or at-fault collisions may result in licence restrictions or suspensions.

Graduated Driver's Licensing Program

SGI's Graduated Driver's Licensing (GDL) program was implemented in September 2005. It was designed to improve road safety by exposing new drivers to incremental levels of risk as they gain more experience in the driving environment.

There are three stages in the program: a nine-month Learner stage, a six-month Novice 1 stage and a 12-month Novice 2 stage. Program restrictions relax as drivers advance through these stages. Drivers in the Novice 2 stage must remain free of at-fault collisions, traffic convictions and suspensions in order to graduate to a full licence.

Saskatchewan has a zero alcohol tolerance level for new drivers.

An evaluation on the initial effects of the program was undertaken during the first cycle of the program. Results indicate that GDL drivers of all ages had an 18% reduction in at-fault crash risk. Program restrictions also appear to have a positive effect in reducing at-fault collisions, specifically among young drivers. Particularly, nighttime crash risk was reduced by 52% after the implementation of the program.

Licensed Drivers and Drivers in Collisions by Driver Age

*The collision rate is the number of drivers in collisions divided by the number of licensed drivers in that age group multiplied by 1,000 (e.g., the 16 year age group - $(1,074/10,772) \times 1,000 = 99.7$).

**The relative risk of being involved in a collision is calculated by dividing the total collision rate for each age group by the average rate for all drivers (e.g., for the 16 year age group - 99.7/59.51 = 1.68).

Number of Drivers Involved in Collisions by Licence Class and Age

* Relative Risk = (% of Total Collisions in Class)/(% of Total Licence Holders in Class)

Licence Class

- Class 1 operators of power units and truck tractors that have a trailer where the gross weight of the towed unit(s) exceeds 4,600 kg
- Class 2 operators of buses having a seating capacity in excess of 24 passengers
- Class 3 operators of trucks with more than two axles that have a trailer(s) in tow, where the gross weight of the towed unit does not exceed 4,600 kg
- Class 4 operators of taxis, ambulances, law enforcement vehicles and buses having a seating capacity of 24 or fewer passengers
- Class 5 operators of cars, vans, two-axle trucks, two-axle vehicles having a trailer(s) in tow where the gross weight of the the unit(s) does not exceed 4,600 kg, buses when not transporting passengers, three-axle motorhomes, taxis and ambulances when not used for hire
- Class 6 operators of motorcycles
- Class 7 Class 5 operators, operating as a learner

Vehicle Factors

There were 48,479 vehicles involved in the 29,651 collisions during 2011. This is an average of 1.63 vehicles per collision. This section provides details on the different types of vehicles involved in collisions.

- Passenger cars accounted for 44.9% of vehicles in all collisions and 34.7% of the vehicles in fatal collisions.
- Pickup trucks accounted for 23.5% of vehicles in all collisions and 29.1% of vehicles in fatal collisions.
- Large trucks represented 3.6% of vehicles involved in all collisions and 16.0% of vehicles in fatal collisions. Research has shown that in 78% of fatal crashes involving a large truck, the action taken by the driver of the other vehicle was the major factor contributing to the collision.
- There were 299 crashes involving a motorcycle/moped/power cycle in 2011. These incidents resulted in 214 injuries and four deaths.

Tables 6.6 to 6.8 show historical data on truck and motorcycle collisions. Similar breakdowns for other vehicle types are available upon request.

Table 6.9 shows a breakdown of registrations by vehicle type. This information can be used when calculating risk exposure for different types of vehicles.

* TAIS records only traffic collisions on public roads. Therefore, many collisions involving snowmobiles and offhighway vehicles are not included in this number. Bicycle collisions are recorded only if there was contact with a motor vehicle on the roadway.

The standard passenger car, pickup truck, van and SUV are involved in 88% of all collisions. Other special categories, such as all-terrain vehicles, large trucks and school buses, are of special interest to various groups and users.

* Insured years is the portion of the year the vehicle is registered. This method of counting registrations was implemented due to short-term registrations.

Example: When three separate motorcycles are registered for six months each out of a complete year, they are counted as 18 months or 1.5 insured years.

Victims and Safety Restraints

TAIS captures information on all passengers involved in injury collisions. This data can be used to calculate exposure rates for occupants by injury severity, age, seating position, gender and many other variables. Additional details, such as injury region of the body and injury treatment, are also available from TAIS.

Figure 7.3 shows the relationship between the severity of injury to vehicle occupants and seatbelt use. The severity of injury is much lower for victims using safety restraints. Ninety-four per cent of those using safety restraints sustained minor, moderate or no recorded injuries. Those occupants not using safety restraints were severely or fatally injured 14.3% of the time, compared to 1.5% of the time for those using restraints.

In September 2004, Transport Canada began conducting observational surveys of seatbelt use, alternating annually between rural and urban communities across Canada. The survey method was changed because of evidence indicating a lower usage rate in rural areas. The new usage rates are a combination of these urban and rural observations. The survey results for 2009 to 2010 report a national average of 95.3% and a rate of 96.8% in Saskatchewan. The complete results of the Canadian survey can be referenced in table 12.2 on page 123.

* Other vehicle occupants are occupants of other non-passenger vehicles that may or may not have seatbelts. Some examples are golf carts and specially modified vehicles that do not fit into our general passenger vehicle body type classifications.

3,180

*TAIS records only collisions on public roads. Therefore, many of the collisions involving snowmobiles and off-highway vehicles are not included in this number. Bicycle collisions are recorded only if the collision occurs with a motor vehicle on the roadway.

Injury Classification

1 Not Injured no visible signs or any complaint of injury

2 Minor minor complaint of injury by victim, but no apparent incapacitation

- 3 Moderate an injury other than a fatal injury or an incapacitating injury, which is evident to observers at the scene of the collision
- 4 Major 1 an injury other than a fatal injury, which prevents the injured person from walking, driving or normally continuing the activities the person was capable of performing before the injury occurred
- 5 Major 2 an injury from which the victim enters into unconsciousness at, or when taken from, the collision scene
- 6 Fatal death within 30 days as a result of injuries incurred in the traffic collision

Fatal Collisions

Table 8.1 provides a breakdown of the fatalities by road user class, day of week, time of day and type of roadway.

The detailed listing in figure 8.2 shows some of the individual factors and a brief description of each of the 138 fatal collisions that occurred during 2011.

Deaths of unbelted occupants

• Thirty-four unbelted vehicle occupants were killed in 2011. This represents 29% of all vehicle occupant deaths.

Age and gender of those not using seatbelts

Age of victim	Male	Female
Under 16	0	1
16-24	8	2
25-54	13	3
55 and older	6	1

Deaths of belted occupants

• Eighty belted vehicle occupants were killed in 2011. This represents 68% of all vehicle occupant deaths.

Age and gender of those using seatbelts

Age of victim	Male	Female
Under 16	0	1
16-24	19	5
25-54	26	8
55 and older	13	7

*Age for one victim was unknown

Deaths where seatbelt use was not known

• Four occupants were killed in 2011 whose seatbelt use was unknown

Age and gender of those where seatbelt use was not known.

Age of victim	Male	Female
Under 16	0	0
16-24	2	1
25-54	1	0
55 and older	0	0

2011 Fatal Collisions Summary

SUMMARY: For the year ending Dec. 31, 2011, there were 150 traffic fatalities in Saskatchewan. They consisted of 85 drivers and 33 passengers, 20 pedestrians, 4 motorcyclists, 4 bicyclists, 3 ATV operators and 1 occupant of another vehicle type.

1. <u>Pedestrian Summary:</u>

- 20 pedestrian deaths
- 5 on urban streets
- 11 on provincial highways
- 2 on designated rural roads
- 2 on First Nations land
- In 8 of the cases, the pedestrian had been drinking, and in 8 cases, pedestrian action was listed as a contributing factor in the incident

2. <u>All-Terrain Vehicle Summary:</u>

- 3 ATV operator deaths
- 2 on designated grid roads
- 1 on a provincial highway

3. Motorcyclist Summary:

- 4 motorcyclists were killed in 2011
- All 4 were killed on provincial highways
- 3 of the crashes were attributed to the action of the motorcyclist

4. Vehicle Occupant Summary:

In 2011, there were 118 vehicle occupant deaths; 80 were using safety restraints and 34 were not. Seatbelt usage for the remaining 4 was not known.

Seatbelt Used: 80 deaths

- □ 33 were in single vehicle crashes, 21 of which were rollovers
- □ Type of vehicle the occupant was in:
 - 42 passenger cars
 - 26 pickup trucks
 - 10 vans or SUVs
 - 2 semi-tractor unit or large truck

Seatbelt Not or Improperly Worn: 34 deaths

- □ 20 victims were in single vehicle crashes, 18 of which were rollovers
- □ Type of vehicle the occupant was in:
 - 18 passenger cars
 - 10 pickup trucks
 - 5 vans or SUVs
 - 1 semi-tractor units or large trucks

Seatbelt Use Not Known or Not Stated: 4 deaths

- **2** victims were in single vehicle crashes, 1 was a roll-over
- □ Type of vehicle the occupant was in:
 - 4 passenger cars

5. 2011 Traffic Deaths by Day of Week:

- Sunday 26
- □ Monday 18
- □ Tuesday 19
- □ Wednesday 14
- □ Thursday 19
- □ Friday 22 32
- □ Saturday

6. 2011 Traffic Deaths by Time of Day:

Hour	Deaths	Hour	Deaths

8 to 8:59 a.m.	6	8 to 8:59 p.m.	11
9 to 9:59 a.m.	3	9 to 9:59 p.m.	7
10 to 10:59 a.m.	1	10 to 10:59 p.m.	3
11 to 11:59 a.m.	3	11 to 11:59 p.m.	8

*One fatality was at an unknown time

7. 2011 Traffic Deaths by Type of Roadway:

Provincial Highways	107
Rural Roads	21
Urban Streets	17
Other Roads	5

				Alcohol	Seatbelt Use	Collision Description
#	Road Location	# Killed	# Injured	Involvement	of Deceased	
1	Rural/Urban Highway	2	0	No	No	The driver of a car failed to obey a stop sign and drove under a semi-trailer unit. Both occupants of the car were killed.
2	Rural/Urban Highway	1	2	No	Yes	The driver of a car struck another car head on. One of the vehicles did not have their headlights on.
3	Grid Road	2	3	Yes	Yes	The driver of a car lost control and hit another car head on. Two occupants in the first car were killed. Alcohol was a factor.
4	Rural/Urban Highway	2	1	No	Yes	The driver of a truck attempted to pass a semi-unit and struck a car head on. The drivers in both vehicles were killed.
5	Rural/Urban Highway	1	1	No	Yes	The driver of a car entered the opposite lane of travel and struck a truck head on. The driver of the car was killed.
6	Rural/Urban Highway	1	2	No	Yes	The driver of a truck entered the opposite lane of travel and struck a SUV head on. The driver of the SUV was killed.
7	Rural/Urban Highway	1	3	No	Yes	The driver of a truck lost control on the icy highway and rolled numerous times into the ditch. The driver was ejected and killed.
8	Rural/Urban Highway	1	1	No	Yes	The driver of a semi attempted to pass a car. The car then turned into the side of the semi. The driver of the car was killed.
9	Rural/Urban Highway	1	1	No	Yes	The driver of a mini-van attempted to make a U-turn on the highway and was struck by a bus. The driver of the van was killed.
10	Grid Road	1	0	No	No	The driver of a truck lost control and hit a hard snowbank on the side of the road. The driver was fatally injured.
Janua	ary Summary: 13 peo	ple killed in 10	0 different co	llisions; 1 collisio	on involved alc	ohol and 2 involved people not wearing a seatbelt.
11	Rural/Urban Highway	1	0	Yes	N/A	The driver of a truck struck and killed a pedestrian. The pedestrian had been drinking.
12	Rural/Urban Highway	1	0	Yes	Yes	A pedestrian jumped out in front of an SUV and was killed.
13	Rural/Urban Highway	1	0	Yes	Yes	The driver of an SUV struck a parked truck head on. The driver of the SUV was killed. Alcohol was a factor.
14	Rural/Urban Highway	2	3	No	Yes	The driver of a car entered the opposing lane of traffic and struck another car. Two occupants were killed.
15	Rural/Urban Highway	1	1	Yes	Yes	The impaired driver of a car lost control and rolled into the ditch. A passenger was killed.
16	Rural/Urban Highway	1	0	No	Yes	The driver of a car entered the opposite lane of travel and struck a semi-unit head on. The driver of the car was killed.
17	Rural/Urban Highway	1	0	No	Yes	The driver of a car attempted to cross the highway in foggy conditions and T-boned the trailer of a semi. The driver of the car was killed.
18	Rural/Urban Highway	1	0	No	Yes	The driver of a truck lost control and landed in the centre median. The vehicle rolled four times. The driver of the truck was killed.
19	Rural/Urban Highway	1	0	Yes	Yes	The impaired driver of a truck lost control and rolled several times and landed in the centre median. The driver of the truck was
20	Rural/Urban Highway	1	1	No	Yes	The driver of a truck rear-ended another truck on the highway. One of the drivers was fatally injured.
21	Rural/Urban Highway	1	2	No	Yes	The driver of a car rear-ended a truck. The driver of the car was killed.
22	Rural/Urban Highway	1	0	No	Yes	The driver of a car took a corner on the highway too narrow and ended up striking a semi head on. The driver of the car was killed.
23	Rural/Urban Highway	1	1	Yes	Yes	The driver of a car failed to stop at a stop sign and was T-boned by a truck.

February Summary: 14 people killed in 13 collisions; 6 collisions involved alcohol.

24	Street	1	2	No	Yes	The driver of a car was attempting to turn left at an intersection when it was T-boned by another car. A passenger was killed.
25	Rural/Urban Highway	1	2	No	Yes	The driver of a truck entered the opposite lane of travel and struck a maintenece truck head on. The driver of the truck was killed.

#	Road Location	# Killed	# Injured	Alcohol Involvement	Seatbelt Use of Deceased	Collision Description
26	Rural/Urban Highway	1	1	No	Yes	The driver of a semi turned in front of a heavy maintenance vehicle and was struck in the front end. The driver of the semi was killed.
27	Grid Road	1	2	No	N/A	The driver of a semi got stuck in the ditch and exited his vehicle. A second semi came along and struck the driver of the first semi, fatally injuring him.
28	Rural/Urban Highway	1	0	No	Yes	The driver of a car crossed into the opposite lane of travel and struck a semi head on. The driver of the car passed away a few days later in hospital.
29	Rural/Urban Highway	1	0	No	Yes	The driver of a pickup truck lost control on a patch of ice and rolled into the centre median. The truck landed on its roof and crushed the driver.
30	Rural/Urban Highway	1	0	Yes	Yes	The impaired driver of a pickup truck lost control and rolled several times into the ditch. The driver was partially ejected.

March Summary: 7 people killed in 7 collisions; 1 collision involved alcohol.

31	First Nation Land	1	0	No	N/A	A pedestrian was struck by an unknown driver and vehicle.
32	Rural/Urban Highway	1	7	Yes	Yes	The impaired driver of a car crossed over into the other lane and hit an SUV head on. The driver of the car was killed.
33	Street	1	0	Yes	N/A	The impaired driver of a truck struck and killed a cyclist.
34	Rural/Urban Highway	3	7	Yes	No	The impaired driver of a van lost control on a gravel road. Three passengers were ejected and killed. There were numerous injuries with all of the occupants.
35	Rural/Urban Highway	1	0	No	Yes	The driver of an SUV crossed over into the opposite lane of travel and struck a semi head on. The driver of the SUV was killed.
36	Rural/Urban Highway	1	1	No	Yes	The driver of a car hit a moose and was killed.
37	Street	1	0	No	N/A	The driver of an SUV struck and killed a pedestrian.

April Summary: 9 people killed in 7 collisions; 3 collisions involved alcohol and 1 involved not wearing a seatbelt.

38	Rural/Urban Highway	1	2	No	Yes	The driver of a car failed to stop at a stop sign and was T-boned at an intersection by a truck. The driver of the car was killed.
39	Grid Road	1	0	Yes	N/A	The impaired driver of an ATV lost control and rolled his vehicle.
40	Rural/Urban Highway	1	5	Yes	No	The impaired driver of a truck lost control and rolled.
41	Grid Road	1	2	Yes	Yes	The impaired driver of a car lost control and rolled into the ditch. The rear passenger was fatally injured.
42	Grid Road	3	0	Yes	Yes	The impaired driver of a truck lost control crossing an uncontrolled intersection and rolled numerous times. All of the occupants died.
43	Street	1	0	No	Yes	The driver of a car drove into the side of a gas truck that was turning at an intersection. The driver of the car was killed.
44	Rural/Urban Highway	1	0	No	Yes	The driver of a truck left the roadway and ended up submerged in a slough.
45	Grid Road	1	0	Yes	Yes	The impaired driver of a car was passing other vehicles when it rolled. The driver was ejected and killed.
46	First Nation Land	1	0	No	N/A	The driver of a truck struck a pedestrian who was walking on the side of the road.
47	Grid Road	1	0	No	No	The driver of a heavy truck entered the ditch and in an attempt to overcorrect, the driver rolled numerous times. The driver was ejected and killed.
48	Street	1	0	Yes	No	A passenger was riding in the door of the bus when the driver hit a pothole and the passenger fell out the door. The passenger was then hit by the bus.

May Summary: 13 people were killed in 11 different collisions; 6 collisions involved alcohol and 3 involved not wearing a seatbelt.

#	Road Location	# Killed	# Injured	Alcohol Involvement	Seatbelt Use of Deceased	Collision Description
49	Rural/Urban Highway	1	0	No	Yes	A semi struck a pedestrian.
50	Rural/Urban Highway	1	0	No	Yes	The driver of a truck struck a pedestrian who ran onto the roadway to catch his dog.
51	Rural/Urban Highway	1	1	No	Yes	The driver of a truck lost control and rolled into the centre median. A passenger was partially ejected and fatally injured.
52	Street	1	0	No	Yes	A pedestrian ran onto the roadway and was struck by a car.
53	Rural/Urban Highway	1	0	Yes	Yes	The driver of a truck swerved into the wrong lane and struck a semi head on.
54	Rural/Urban Highway	1	3	No	No	The driver of a car turned onto the highway and was struck by a truck head on. The driver of the car was ejected and killed.
55	Rural/Urban Highway	1	2	No	No	A car was crossing the highway when it struck a truck. A passenger in the car was ejected and killed.
56	Street	1	0	No	N/A	The driver of a car struck a pedestrian at a marked cross walk.
June	Summary: 8 people k	illed in 8 diffe	erent collision	s; 1 collision inv	olved alcohol a	and 2 involved not wearing a seatbelt.
57	Rural/Urban Highway	2	3	Yes	No	The impaired driver of a car lost control on a curve and rolled into the ditch. All of the pasengers were ejected, two were fatally injured.
58	Rural/Urban Highway	1	0	No	N/A	The driver of an ATV was hit from behind by another ATV. One of the drivers fell off the vehicle, struck her head and was fatally injured.
59	Rural/Urban Highway	1	0	No	No	The driver of a car appeared to be driving in excessive speed when he lost control and rolled into the ditch. The driver was ejected and fatally injured.
60	Grid Road	1	0	No	No	The driver of a truck T-boned a semi and was ejected and fatally injured.
61	Rural/Urban Highway	1	1	No	Yes	The driver of a semi failed to yield the right of way and struck a car. The driver of the car was killed.
62	Rural/Urban Highway	1	2	No	Yes	The driver of a car crossed into the oncoming lane of traffic and struck another vehicle.
63	Rural/Urban Highway	1	0	Yes	N/A	A pedestrian ran onto the roadway and was struck by an SUV.
64	Street	1	4	No	Yes	The driver of a car lost control and crossed over into the opposite lane and struck a car head on.
65	Rural/Urban Highway	1	0	No	No	The driver of a car crossed over the centre line and struck a semi head on. The driver of the car was ejected and killed.
66	Rural/Urban Highway	1	2	Yes	Yes	The impaired driver of a car side-swiped one vehicle and then hit a truck head on.
67	Rural/Urban Highway	1	2	No	No	The driver of an SUV was extremely fatigued and lost control of his vehicle and rolled. A passenger was ejected and fatally injured.
68	Street	1	0	No	N/A	A cyclist was struck and killed.
69	Rural/Urban Highway	1	0	No	N/A	The driver of a motorcycle failed to negotiate a curve on the highway and ended up in the ditch.
70	Rural/Urban Highway	1	0	No	N/A	A pedestrian walked in front of a van and was fatally injured.
71	Grid Road	1	0	Yes	N/A	The driver of a truck ran over a pedestrian.
72	Street	1	0	No	N/A	A truck struck a cyclist at an intersection.

July Summary: 17 people killed in 16 different collisions; 4 collisions involved alcohol and 6 involved not wearing a seatbelt.

73	Rural/Urban Highway	1	0	Yes	Yes	The driver of a truck fell asleep at the wheel and drove into a ditch where he rolled several times.
74	Rural/Urban Highway	1	2	Yes	Yes	The impaired driver of a truck lost control and ended up striking a group of trees in the ditch. A passenger was killed.

#	Road Location	# Killed	# Injured	Alcohol Involvement	Seatbelt Use of Deceased	Collision Description
75	Rural/Urban Highway	1	0	Yes	N/A	A pedestrian was struck by a car in the middle of the highway.
76	Street	1	0	Yes	No	A passenger was riding on the tailgate of a truck when he fell off suffering fatal injuries.
77	Rural/Urban Highway	1	0	No	N/A	The driver of a motorcycle was struck by a truck.
78	Grid Road	1	0	Yes	N/A	The impaired driver of an ATV left the roadway and went down a steep dropoff and rolled into a body of water. The driver was pinned under the vehicle.
79	Grid Road	1	1	No	Yes	The driver of a car failed to yield at an uncontrolled intersection and was struck by a pickup truck. A passenger in the car was killed.
80	Rural/Urban Highway	1	0	Yes	Yes	The impaired driver of a truck struck a parked mobile home that was being hauled on the back of a trailer. The trailer was being hauled by a truck. This was a head-on collision.
81	Rural/Urban Highway	1	1	No	No	The driver of a car crossed a highway and struck another car. One person was killed.
82	Grid Road	1	0	Yes	No	The driver of a van lost control on the road and rolled into the ditch.
83	Rural/Urban Highway	1	0	No	No	The driver of a car hit a semi head on.
84	Rural/Urban Highway	1	0	Yes	N/A	A pedestrian stepped out into moving traffic and was struck by a truck.
85	Rural/Urban Highway	1	1	No	Yes	The driver of a truck failed to stop at a stop sign and entered the highway and collided with an SUV. The driver of the SUV was killed.
86	Rural/Urban Highway	1	0	Yes	N/A	A pedestrian was walking on the highway when he was struck by a semi.
87	Rural/Urban Highway	1	0	Yes	Yes	The driver of a pickup truck lost control and rolled into a ravine. The driver had been drinking and was partially ejected.
88	Rural/Urban Highway	1	3	Yes	Yes	The impaired driver of a car struck a guard rail fatally injuring a passenger.
89	Rural/Urban Highway	1	0	No	Yes	The driver of a car pulled a U-turn in front of a passing truck on the highway. The driver of the car was killed.
90	Rural/Urban Highway	1	0	Yes	N/A	A pedestrian was struck by a semi.

August Summary: 18 people killed in 18 different collisions; 12 collisions involved alcohol and 4 involved not wearing a seatbelt.

91	Street	1	1	No	Yes	The driver of a car struck a light standard.
92	Rural/Urban Highway	1	1	No	Yes	The driver of a car lost consciousness and entered the ditch and struck a rock pile. A passenger was fatally injured.
93	Rural/Urban Highway	1	1	Yes	No	The driver of a truck lost control of his truck after he tried to overcorrect. He entered the ditch and rolled several times. The driver was ejected and killed.
94	Rural/Urban Highway	1	0	No	Yes	The driver of a moped performed a U-turn in front of a semi and was fatally injured.
95	Rural/Urban Highway	1	0	No	Yes	The driver of a truck lost control of the vehicle and rolled into the ditch numerous times. The driver was ejected.
96	Rural/Urban Highway	1	1	No	N/A	The driver of a motorcycle was struck by a car.
97	Rural/Urban Highway	1	1	Yes	No	The driver of a truck lost control on a curve and rolled into the ditch. The driver was ejected and killed. The driver had been drinking.
98	Rural/Urban Highway	1	0	No	Yes	The driver of a car struck a semi head on.
99	Rural/Urban Highway	1	0	Yes	Yes	The driver of a truck lost control and rolled into the ditch. The driver of the truck was drinking and was ejected.
2011 Listing of Fatal Collisions

#	Road Location	# Killed	# Injured	Alcohol Involvement	Seatbelt Use of Deceased	Collision Description
100	Rural/Urban Highway	1	3	No	Yes	The driver of a car fell asleep at the wheel and lost control into the ditch rolling several times.
101	Grid Road	1	1	No	No	The driver of a truck failed to yield at an uncontrolled crossing and was struck by a semi-unit. The driver of the truck was ejected and killed.
102	Rural/Urban Highway	2	5	Yes	No	The driver of a truck lost control, left the road and then struck a culvert. All seven passengers were ejected, two passengers fatally injured. Alcohol was involved.
103	Rural/Urban Highway	1	1	Yes	No	The impaired driver of a truck lost control and struck an approach. The truck then rolled. The passenger was ejected and killed.
104	Rural/Urban Highway	2	1	Yes	No	The driver of a car was broadsided by another car. Both occupants were ejected and killed in one of the vehicles.
105	Rural/Urban Highway	1	3	No	Yes	The driver of a truck swerved into the opposite lane of travel and struck another truck head-on. One person was killed.
106	Rural/Urban Highway	1	1	No	No	The driver of a car lost control and rolled into the ditch. A passenger was ejected and killed.
107	Grid Road	1	0	Yes	Yes	The impaired driver of a car crossed a T-intersection and left the roadway striking a large pile of steel pipe. The car burst into flames and the driver was fatally injured.
Septe	mber Summary: 19 p	eople killed i	n 17 different	collisions; 7 col	llisions involved	d alcohol and 7 involved not wearing a seatbelt.
108	First Nation Land	1	0	Yes	No	The driver of a car lost control and entered a slough. The car ended up upside down. Alcohol suspected to be a factor.
109	Rural/Urban Highway	1	1	No	Yes	The driver of a truck hit a semi head on.
110	Street	1	1	No	Yes	The driver of a car was driving too fast for conditions when he lost control and struck a tree.
111	Grid Road	1	3	No	Yes	The driver of a truck lost control on a wet road and rolled into the ditch. The driver was ejected and passed away later in hospital.
112	Rural/Urban Highway	1	2	No	Yes	The driver of a car passed when it was unsafe and struck a truck head on. The driver of the truck was killed.
113	Rural/Urban Highway	1	1	Yes	Yes	The impaired driver of a car was driving too fast on a winding road when he lost control and struck some bushes. The driver was killed.
114	Rural/Urban Highway	1	1	No	Yes	The driver of a jeep was exceeding the speed limit, lost control and rolled into the ditch numerous times. The jeep then started on fire.
115	Rural/Urban Highway	1	0	No	N/A	The driver of a semi hit a cyclist.
116	Rural/Urban Highway	1	0	No	Yes	The driver of a car veered into the other lane of travel and struck a semi head on.
117	Rural/Urban Highway	1	0	No	Yes	The driver of a cement truck swerved to avoid a moose and rolled down an embankment. The driver died later in hospital.

October Summary: 10 people killed in 10 different collisions; 2 collisions involved alcohol and 1 involved not wearing a seatbelt.

118	First Nation Land	1	1	Yes	Yes	The impaired driver of a car ran over a cow that was lying on the road. The driver of the car passed away in hospital.
119	Grid Road	1	0	No	Yes	The driver of car struck a piece of farm machinery. After the collision, the car continued into a field and ended up in a slough.
120	Grid Road	1	0	Yes	Yes	The driver of a car struck a truck head on.
121	Street	1	0	No	Yes	The driver of a car was exceeding the speed limit when he lost control and struck a tree.
122	Rural/Urban Highway	1	0	No	Yes	The driver of a truck exited the roadway and entered a body of water.
123	Rural/Urban Highway	1	0	No	Yes	The driver of a car pulled out in front of a passing semi unit.
124	Rural/Urban Highway	1	0	No	Yes	The driver of a car lost control and struck a truck head on.

Table 8.2

2011 Listing of Fatal Collisions

#	Pood Logation	# Killod	# Injured	Alcohol	Seatbelt Use	Collision Description
#	Road Location	# Killed	# injured	Involvement		
125	Street	1	0	Yes	N/A	A pedestrian was struck and killed by an impaired driver.
126	Rural/Urban Highway	2	3	Yes	No	The driver of truck was signalling to turn off of the highway when it was rear ended by a car travelling at a high rate of speed. Two occupants in the car were partially ejected and fatally injured.
127	Rural/Urban Highway	1	0	No	No	The driver of an SUV was struck by a truck that failed to stop at a stop sign. The driver was ejected.
128	Rural/Urban Highway	1	1	No	Yes	The driver of a car atempted to cross the highway from a service road and was struck by a semi.
Nove	mber Summary: 12 p	eople were ki	lled in 11 diff	erent collisions;	4 collisions inv	volved alcohol and 2 involved not wearing a seatbelt.
129	Rural/Urban Highway	1	0	No	Yes	The driver of a car slid into the rear of a semi. The roads were icy at the time of the collision.
130	Rural/Urban Highway	1	0	No	Yes	The driver of a car struck a horse. A passenger was fatally injured.
131	Rural/Urban Highway	1	2	No	Yes	The driver of car collided with a truck head on. The driver of the car was killed.
132	Street	1	0	No	N/A	A pedestrian was crossing the street and slipped on a patch of ice. While the pedestrian tried to get up he was hit by a truck.
133	First Nation Land	1	4	Yes	Yes	The impaired driver of a van lost control and rolled. A passenger was fatally injured.
134	Rural/Urban Highway	1	0	Yes	N/A	An impaired pedestrian was lying on the roadway and was struck and killed by an impaired driver.
135	Rural/Urban Highway	1	5	No	No	The driver of a car lost control and struck two other vehicles.
136	Rural/Urban Highway	1	1	No	Yes	The driver of an SUV slid on an icy highway and struck a truck.
137	Rural/Urban Highway	1	0	Yes	Yes	The driver of a truck fell asleep and lost control of the vehicle. The driver had been drinking.
138	Street	1	0	No	No	The driver of a car was driving in the opposite lane of travel, lost control and struck a guard rail. The driver was partially ejected.

December Summary: 10 people were killed in 10 different collisions; 3 collisions involved alcohol and 2 involved not wearing a seatbelt.

Pedestrians

2011 Quick Facts on Pedestrian Collisions

- 20 pedestrians were killed and 342 were injured in 2011.
- Pedestrian action was a contributing factor in 8 of the 20 deaths.
- 8 of the pedestrians killed had been drinking.
- 18% of the pedestrians injured or killed were under the age of 15.
- 25% of the pedestrians were injured or killed in an urban area.
- 36% of the pedestrians were hit while trying to cross at an intersection, and 20% were hit while crossing or running onto the roadway mid-block.
- Most pedestrian collisions occurred in late afternoon and early evening. The highest hourly total occurred between 3 and 4 p.m.
- Tuesday and Friday were the worst days for pedestrian collisions and September was the worst month.

Alcohol

Drinking and driving remains one of the top contributing factors in fatal collisions in Saskatchewan. SGI continues to work on solutions to help resolve this important traffic safety issue.

There are serious consequences for drinking and driving. Driver's licence suspension periods apply if a driver is convicted of driving with a blood alcohol level over .08, impaired driving or failure to provide a breath sample. In Saskatchewan, the first conviction of any of the above offences will result in a driver's licence suspension for a period of one year. A second offence results in a three-year licence suspension and any subsequent offence results in a five-year licence suspension. Fines for these offences start at \$600, with no maximum.

If a driver is at fault for a collision while driving impaired, they have no insurance coverage for damage to their vehicle or to the vehicles or property of others involved.

Before a driver's licence can be reinstated, the driver must attend a mandatory addiction screening and assessment, and complete an education or recovery program recommended by their addictions counsellor.

Drinking and driving offenders who have successfully completed their required addiction screening and all education or recovery programs may be eligible to participate in the Ignition Interlock Program.

Administrative Sanctions

New drivers who consume any amount of alcohol and drive receive a 30-day suspension, and must attend a Driving Without Impairment (DWI) course for the first occurrence. Subsequent occurrences result in a 90-day suspension, mandatory addictions screening and an education or recovery program recommended by a drug and alcohol counselor. These all must be completed before the driver's licence will be reinstated.

Experienced drivers with a blood alcohol level over .04, or those refusing to take the Standardized Field Sobriety Test receive a 24-hour driver's licence suspension. A second 24-hour suspension is extended to a 15-day driver's licence suspension. The driver is also required to attend a DWI course if a second 24-hour suspension is incurred. Subsequent occurrences result in a 90-day suspension, addictions screening and a recommended education or recovery program.

All drivers who are charged with a blood alcohol level exceeding .08 or refusing a breath test will be subject to a 90-day suspension. The individual receives an immediate 24-hour suspension and seven-day driving permit if the driver has a valid driver's licence. The 90-day administrative suspension begins after the expiry of the seven-day driving permit.

Number of Collisions and Victims Involving Alcohol by Year

Table 10.1

		Number of Victims

2003	701	477	58	1,236	807	63	870
2004	617	465	44	1,126	799	53	852
2005	707	410	42	1,159	670	46	716
2006	703	414	45	1,162	745	46	791
2007	873	481	42	1,396	871	46	917
2008	1,073	564	67	1,704	1,002	79	1,081
2009	1,009	524	56	1,589	887	66	953
2010	926	458	63	1,447	776	70	846
2011	874	381	50	1.305	633	59	692

Alcohol involvement in fatal traffic collisions is confirmed through the reporting police agency and Coroner's Office after all investigation and lab testing has been completed. This procedure is not done for injury and property damage only collisions.

Alcohol involvement in fatal traffic collisions is confirmed with the reporting police agency and Coroner's Office after all investigation and lab testing has been completed. This procedure is not done for injury and property damage only collisions.

Traffic Collision Statistics

Table 11.1 is a detailed summary of all provincial highways in the province. The length of each section of highway, along with the average daily traffic on that section, is used to calculate travel (kilometres in millions) and a collision rate (collisions per million vehicle kilometres) for each section.

Tables 11.2 and 11.3 summarize collisions by community, and Table 11.8 shows a similar summary by rural municipality. Collision rates are calculated based on populations, as well as travel, where applicable.

2011 Quick Facts:

- The collision rate for all provincial highways is 0.84 collisions per million vehicle kilometres (Mvkm).
- The average number of collisions per 100 people for communities with a population:
 - of 5,000 or more is 2.68
 - of 250 to 4,999 is 0.58
 - under 250 is 0.35
- Regina and Saskatoon combined account for 42% of the province's population and 45% of the collisions.
- Regina recorded 5,274 collisions, 1,387 injuries and 2 deaths in 2011.
- Saskatoon recorded 8,151 collisions, 1,601 injuries and 8 deaths in 2011.
- Alcohol was a factor in 1,305 traffic collisions in Saskatchewan during 2011.
- The collision rate for all rural municipalities is 2.69 collisions per 100 people and 1.09 collisions per million vehicle kilometres.

Urban Communities with a Population of 5,000 or More

Populations are based on Saskatchewan Health Services Plan statistics.

TAIS provides each city municipal engineering department with collision data specific to their city. This data, mostly in electronic form, enables each city to do a much more detailed analysis of their collisions. Many of them, in turn, summarize and publish their own collision statistics and internal analysis.

Additional information specific to any city may be obtained by contacting their respective engineering department. A listing of contacts for some of the cities is provided below.

Estevan	Mr. Greg Wock	306-634-1823
Humboldt	Mr. Rod Halyk	306-682-2221
Lloydminster	Mr. Adam Homes	780-875-2302
Melfort	Mr. Gerald Gilmore	306-752-5911
Melville	Mr. Allan Callfas	306-728-6865
Moose Jaw	Mr. Ryan Johnson	306-694-4473
North Battleford	Mr. Stewart Shafer	306-445-1735
Prince Albert	Ms. Keri Sexsmith	306-953-4900
Regina	Mr. Joseph Otitoju	306-777-7749
Saskatoon	Ms. Shirley Matt	306-975-2642
Swift Current	Mr. Trevor Feicht	306-778-2777
Weyburn	Mr. Blaine Frank	306-848-3230
Yorkton	Mrs. Dawn Oehler	306-786-1737

Additional information is available from TAIS for any community wishing to do further analysis of the collisions in their respective areas. Please contact SGI's Traffic Safety Program Evaluation department at 306-775-6668.

A new vision for improving road safety in Canada was approved in 2011. Canada's third national road safety strategy, which has a five-year timeframe (2011-2015), is somewhat different from its two predecessors. The strategy is similar in that it will retain long-term vision that Canada will have the safest roads in the world. As well, the four strategic objectives are expected to result in safer road users, safer road infrastructure and safer vehicles through:

- raising public awareness and commitment to road safety,
- improving communication, cooperation and collaboration among all stakeholders,
- enhancing enforcement, and
- improving road safety information in support of research and evaluation.

A number of key elements contribute to the Road Safety Strategy 2015's uniqueness. These key elements are:

Flexibility: The strategy will be considerably more flexible than its predecessor. The strategy outlines the best practices and initiatives that jurisdictions will have the flexibility to adopt depending on their suitability, feasibility and acceptability within their respective operating environments. Each jurisdiction with develop and "own" their respective road safety plans.

Holistic approach: The strategy will take a holistic approach to road safety and provide a coordinated plan which includes initiatives to address road users, infrastructure and vehicles. This acknowledges the interdependencies that exist between drivers, roads and vehicle safety design, and will move the Road Safety Strategy 2015 to more of a safe systems framework.

Targets: Hard percentage targets will not be established at the national level, instead progress will be measured using rate-based measures. The road safety strategy will seek to achieve directional downward trends in fatalities and serious injuries throughout its five-year duration. Jurisdictions will continue to report fatalities and serious injuries to Transport Canada on an annual basis.

Ownership: While the Canadian Council of Motor Transport Administrators (CCMTA) led the development of the strategy and will manage it, each jurisdiction will "own" the strategy and will use a best practice framework to develop their own jurisdictional plans. CCMTA, working through the jurisdictions and its committees and task forces, will be responsible for updating the strategy. Given its fluid and proactive design, updates may include documenting progress made on new research projects undertaken, identifying new initiatives to be included in the multi-cell matrix of key target groups and

contributing factors, revising the framework of proven best practice initiatives and reporting on its progress.

<u>Timeframe</u>: The strategy will have a shorter five-year timeframe and a mid-term evaluation of its success will be conducted in year three.

It is expected the road safety strategy will inspire road safety stakeholders from all levels of government as well as key public and private sector stakeholders to work together towards the common goal of making Canada's roads the safest in the world.

Additional information regarding Canada's Road Safety Strategy 2015 can be obtained from the CCMTA at www.ccmta.ca. Collision statistics and further information may be obtained by calling Transport Canada toll free at 1-800-333-0371 or visiting their website at www.tc.gc.ca/roadsafety.

Source of Information: Transport Canada Survey of Seatbelt Use in Canada. Surveys were conducted in urban areas from 1994 to 2001 and in rural areas in 2002. Beginning in 2003 the survey results are an estimate of both urban and rural areas over a two-year period.

Additional information specific to other provinces or Canada may be obtained from the respective province or Transport Canada. A list of contacts in each jurisdiction is listed below. Table 12.3

Collision History on Provincial Highways *

* Effective Jan.1, 2010, the damage threshold for recording property damage only collisions from SGI's claims system into TAIS was increased from \$1,000 to \$5,000. This change resulted in a significant decrease of property damage only collisions entered into TAIS. For consistency, this threshold change was also applied to previous years of data shown in this publication to allow for comparison.

Collision History on Other Roads*

* Effective Jan.1, 2010, the damage threshold for recording property damage only collisions from SGI's claims system into TAIS was increased from \$1,000 to \$5,000. This change resulted in a significant decrease of property damage only collisions entered into TAIS. For consistency, this threshold change was also applied to previous years of data shown in this publication to allow for comparison.

Glossary

Police-Reported Motor Vehicle Collision	Police agencies are required to investigate and complete a motor vehicle collision report for all collisions that involve bodily injury or death, a hit and run, an out-of-province or unregistered vehicle, an impaired driver (by alcohol or drugs) and collisions where a motor vehicle must be towed from the scene.
Motor Vehicle Collision Captured By Claims	An incident that has not been reported by police that involves one or more motor vehicles in transport, and results in personal injury or a minimum of \$5,000 in property damage, not including damage to cargo.
Incident	Any set of motor vehicle events, not under human control, that includes at least one occurrence of injury or damage. It originates when human control of the vehicle is lost and terminates when control is regained, or, in the absence of persons who are able to regain control, when all persons and property are at rest. This excludes events that are the result of deliberate intent, legal intervention or natural disasters. For example, if a vehicle catches fire due to mechanical failure and the driver is able to stop safely, a motor vehicle collision did not occur because control of the vehicle was never lost.
Motor Vehicle	Any motorized mechanically or electrically powered land vehicle not operated on rails. Collisions that involve only construction or maintenance equipment within the right of way are not reportable on TAIS.
In Transport	A vehicle that is "in motion or being operated" on a roadway; this includes harm to property that reduces the monetary value of that property. It includes harm to animals that have monetary value. It excludes mechanical failure during normal operation, such as a tire blowout.
Public Roadway	Any highway, secondary road, rural road, street, avenue, parkway, lane, alley or bridge designed and intended for, or used by, the general public for the passage of motor vehicles. This includes sidewalks, boulevards and the immediate right of way adjacent to and parallel with the roadway. It does not include privately maintained roads, driveways or parking lots.
Snowmobiles and Off-Roadway Vehicles	Collisions involving snowmobiles and off-roadway vehicles that occur within the right-of-way of a public roadway are recorded as part of that roadway. If they occur outside of the right of way, they are on private property.
Road Authority	The jurisdiction responsible for the general maintenance and traffic safety of the road.
Urban Streets	Any street, lane or back alley within the incorporated limits of a city, town, village or hamlet, except those streets recorded as a numbered highway.
	Street : Any public road of an urban street system under the maintenance or jurisdiction of a municipal government. In the case where a road is

maintained by a municipal government and would more easily be coded as a numbered highway, exceptions may be made.
Lane/Back Alley: Any alley or lane within an urban area intended for use by the public and maintained by the local government.
Any rural/urban highway, provincial road, community access or service road, or other highway as described below.
Rural/Urban Highway : Any numbered provincial highway in a rural or urban area with a population less than 1,000 that is maintained by the Saskatchewan Ministry of Highways and Infrastructure, and any roadways within urban limits that the police have been permitted to code as a highway for convenience (see street definitions).
Provincial Roads (900 series highways) : Any public highway with a highway number greater than 900.
Community Access, Service Road/Other : Roads built and maintained by Saskatchewan Ministry of Highways and Infrastructure providing access to communities, industrial plants and/or land parcels.
Any designated grid, municipal or other road as defined below.
Designated Grid Road : A municipal road designated as a municipal grid or main farm access road on the Saskatchewan Municipal Road Inventory Maps and posted with customary grid road signs. Collisions on grid roads going through First Nations are coded to the First Nations (code 09).
Municipal/Other Rural Road : Any rural municipal road not designated as a grid road. These will include trails, bladed and non-bladed roads, and local streets in unorganized hamlets. Collisions on municipal roads going through First Nations are coded to the First Nations (code 09).
Any location not identified under urban, highway or rural road locations.
First Nations Grid or Municipal Road : Any public road within a First Nations boundary, other than a provincial highway, serving as an access or internal road for a First Nation.
Northern Forest Road : Roads in forested areas built and maintained with the primary intent of providing access to forestry operations.
Federal/Provincial Lands : Any road other than a numbered provincial highway serving as a public access or internal road to federal or provincial land, such as parks, federal community pastures, etc.
Not Known : This code is intended for use only when a general location is definitely not known.
Privately-owned property, both in rural and urban areas, such as parking lots, parkades, farmyards, private roads, driveways, service station lots, etc. Collisions coded to this Road Authority are not recorded on TAIS.

Property Damage Only Collisions	A police attended motor vehicle collision with no personal injuries or deaths. Or A collision damage claim that was not reported to police with over \$5,000 in total damages and no personal injuries or deaths.
Injury Collisions	A motor vehicle collision resulting in a non-fatal injury to one or more persons. An injury is defined as any bodily harm resulting from the collision.
Fatal Collisions	A motor vehicle collision resulting in death within 30 days to one or more involved persons.
Impaired	A person with a blood alcohol content exceeding the legal limit.
Had Been Drinking	A person that had consumed alcohol but has a blood alcohol content less than the legal limit.
Major Contributing Factors	Contributing factors are those circumstances or factors that have directly contributed to the collision or its severity. TAIS recognizes that a collision usually results from many causal factors. The collision data system accepts up to four contributing factors for each vehicle involved in a collision. Factors can be selected from four categories: human condition, human action, vehicle condition or driving environment.

Due to differences in reporting definitions, the number of collisions and associated casualties published in this report do not necessarily reflect the collision and injury claims experience of the Saskatchewan Auto Fund. Traffic collisions are reported in the Traffic Accident Information System (TAIS) only when personal injuries are sustained, police attend the accident or a property damage claim is above \$5,000, whereas a collision claim may occur for any amount of property damage over the applicable deductible.

Private property and parking lot collisions, as well as deliberate acts of vandalism or natural causes, are also not recorded in TAIS.

The information presented in this publication reflects all police and insurance claim reports known to SGI as of December 2010. Since TAIS is updated on a continual basis, information in future publications may vary from what is published in this report.
