

my name is frank regier i am here to present my opinions on what should be done on traffic safety . i will be presenting with 2 hats .1)concerned citizen and 2)as a blood donor.

penalties for drunk driving is not sufficient in saskatchewan .

People are driving with suspended licenses some drivers have -32 safety rating and after a safety course

get their license back . This is unacceptable because the risk they took that could of and sometimes deadly consequences .

I think the fines should be higher they should start at \$500.00 no lower then that amount because people are still driving drunk .

They are driving with suspended licenses and un registered vehicles the fines are too small. Pressure is being put on blood donors

due to large amount of car accidents a majority caused by drunk drivers ,unregistered vehicles and suspended drivers.

The current system isn't working . Safety rating is there for a reason to show how responsible you are as a driver

. Driving is a privilege not a right people don't treat that as such . It should be that if you drink you cannot drive at all

0 tolerance of alcohol should be in place because even 1 drink is too much .

Another concern is speeding fines for speeding is too low increase the fines for speeding and increase the points against license for

speeding when i see accidents involving drunk driving these accidents can be preventable and the current fines are not high enough.

Our police service has been victims of drunk drivers through their cruisers being hit by a drunk driver but not much consequences

for the impaired driver. After the safety rating reaches a certain level the license should be taken away permanently. There has to be

a limit for the negative safety rating.
